

**Geometry Reminder:**

An ellipse is the set of all points in a plane such that the sum of the distances from any point  $P$  to two fixed points  $F_1$  and  $F_2$  is constant. Each fixed point is called a **focus** of the ellipse. The plural of focus is foci.

$r_1$  and  $r_2$  are called **focal radii**.

Refer to Lecture Notes for Information on Ellipses in Standard Form...

<http://www.lcusd.net/lchs/dclausen/algebra2/ellipses.htm>

Ex 1) For the ellipse find the center, vertices, and foci, then draw the graph.

$$\frac{(x+3)^2}{25} + \frac{(y-2)^2}{16} = 1$$

horizontal center  $(-3, 2)$

$$a = 5 \leftrightarrow b = 4 \updownarrow$$

vertices:  $(-8, 2)$   $(2, 2)$

$(-3, 6)$   $(-3, -2)$

$$c = \sqrt{25 - 16} = \sqrt{9} = 3 \leftrightarrow$$

foci:  $(-6, 2)$   $(0, 2)$

Ex 2) For the ellipse find the center, vertices, foci, and graph the ellipse:

$$\frac{(x-1)^2}{16} + \frac{(y+1)^2}{36} = 1$$

vertical center  $(1, -1)$

$$a = 6 \updownarrow \quad b = 4 \leftrightarrow$$

vertices:  $(1, 5)$   $(1, -7)$   
 $(-3, -1)$   $(5, -1)$

$$c = \sqrt{36-16} = \sqrt{20} = 2\sqrt{5} \doteq 4.47 \doteq 4.5 \updownarrow$$

foci:  $(1, 3.5)$   $(1, -5.5)$
